

Unit 14 – Different types of walls

KV zur Differenzierung: Schneiden Sie die Textteile und Bilder aus und lassen Sie sie von schwächeren Schülerinnen und Schülern zuordnen und/oder in die richtige Reihenfolge bringen.

Task 08 – Match the pictures and the steps.

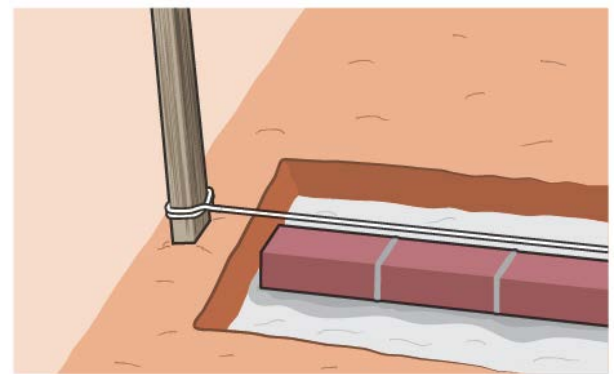

Measure and stake out the size you want your wall to be. Then dig out a trench for your foundation. It should be at least 60 cm deep.

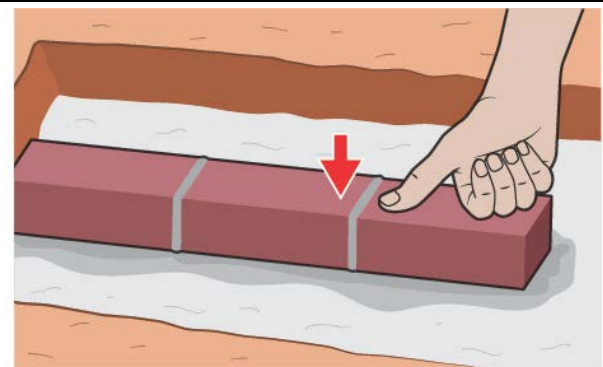

Mix and pour concrete into the trench. Make sure the foundation is even.

Mix mortar in your wheel barrow. Attach a string around two stakes as a guideline for the first course. This ensures the wall will be straight.

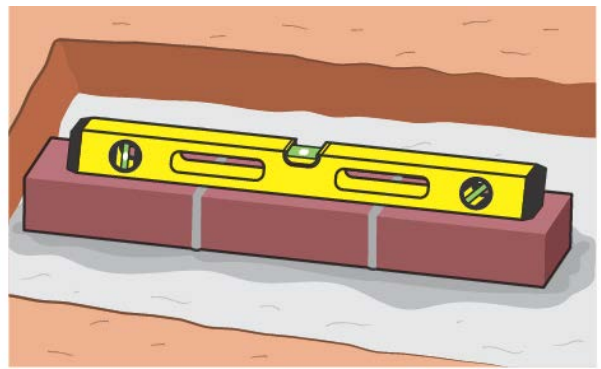

Put mortar onto the foundation. Take a brick and put it onto the mortar. Press the brick down firmly.

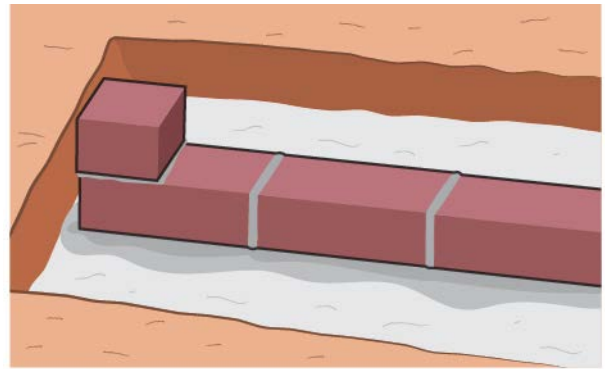

Trowel more mortar onto the foundation and lay bricks in a course. Use the spirit level to make sure they are level. Scrape away any extra mortar as you work.

Start the second course with half a brick and continue building your wall from the ends inward.

Make sure the joints are accurately filled with mortar and scrape away any excess mortar with a trowel.

Add courses to finish the bond. Don't forget to start every second course with half a brick. Consider using a spirit level as a vertical guide, after every second row.
