

Unit 15 Working together on the building site

Task 09 – Flowchart: Put the steps into the correct order.

The owner buys a property.

Surveying technicians are surveying the area.

Architectural draughtsmen/-women are preparing construction drawings.

If necessary, a demolition company is removing an old building or trees.

An earth moving company is doing the excavation work.

The foundation and the basement are done by form-workers or bricklayers and trenches are built by underground construction workers.

The structure is done by bricklayers and form-workers.

The roof structure is constructed by carpenters (flat roof by form-workers).

Roofers are putting tiles on the roof structure (flat roof: tinsmith).

Insulators and plasterers are doing the façade and fitting insulation material.

Electricians and plumbers start the interior work.

Joiners or tinsmiths are mounting windows.

Drywall builders are mounting drywall panels and apply plaster.

Screed is laid by bricklayers or floor layers.

Painters are painting the plastered walls.

Floor layers are laying a carpet, vinyl or timber flooring.

Joiners are mounting specially designed wooden objects like doors.

Next step: furniture ...
