

Unit 5 Tools

Task 05

Announcer: Listen and find out which tools these apprentices are talking about.

Tom: This type of machine can be used for many different purposes. You'll find it in almost every metal processing workshop. I use this machine tool for various operations such as cutting, sanding or drilling in order to create a symmetric work piece. It holds the material and rotates it about a horizontal axis against a tool that shapes it. It removes material from the piece.

Lilly: I use this hand tool to grip a work piece to free both hands to work on it.

David: This manual power tool develops a very high torque to turn screws, nuts and bolts.
