

Unit 29 – Insulating work

Task 07

Announcer: Listen to the descriptions of the insulation material.

Narrator: The first material looked at is a light inorganic fibrous material used for heat and sound insulation. It has a low thermal conductivity.

It's used on all types of pipe work, particularly industrial pipe work operating at higher temperatures. The solution is ...

The second material is widely used on refrigeration and air-conditioning pipe work. It's also used on heating and hot-water systems. It is ...

Last but not least we are looking for a material that's manufactured from aluminium. It is used to protect the insulating material from weather and mechanical damage. It is ...
